

Overwhelmingly impressive down to the last detail

- **Innovative**
- **Wide passage**
- **Representative design**
- **No portals**

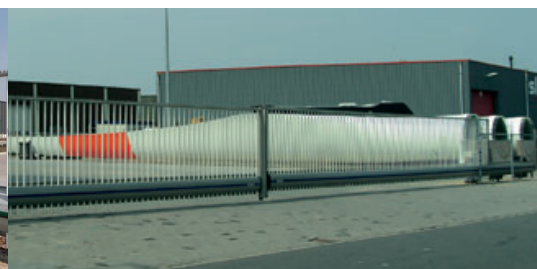

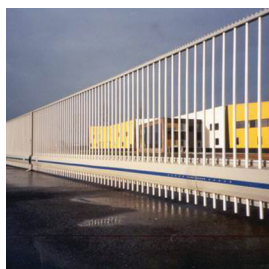

In many respects, the Heras Orion is a special and innovative gate. The design, the technique, the ease of operation and the enormously wide functionality of this cantilever gate are impressive. Large lorries, airplanes and special transport vehicles with extremely large objects can pass through the Orion access gate without any trouble. The technique Heras uses for its Orion gate is simply unique. The cantilever gate has a very sturdy structure: comparable to the wing of an airplane.

Ample dimensions:
can bridge passages
of up to 24 metres
without any problem

Many finishes: from
galvanised to coated
and in an Atlas, Pegasus
or Heracles design

Low maintenance
costs: minimum
friction thanks to
latest drive technique

Finish: available
in all colours to match
your house style
